

CheckCUIL RedApp Guidelines

Red App Name: CheckCuil

Red App Version: 1.1

Market: Argentina

Using the Red app:

The script is being triggered by active listening, using the format W¥.

Once the command is executed, the script will read the name reference of the PNR, looking for the CUIL number (Número Fiscal), if present, the ticketing transaction will be performed. If not, the script shows a warning message and prevents the ticketing transaction.
