

Zoom And Go Software Features ZAG Version 7.5 (Sabre Ver 1.0.14.2023)

	Standard	Pro	Enterprise
Hotel Search – Shopping and Booking Features			
Use natural language search within the GDS to locate any hotels in the world. Decrease training time and increase agent productivity. Enter any spelling in any language to find relevant hotels (i.e. Eyefull Towre, Paris)	✓	✓	✓
Shop and book Hotels using a Map Interface that is fully integrated within the GDS. Display and filter every hotel (not a subset) on an interactive map that maintains any designated sort order and highlights preferred hotels.	✓	✓	✓
Increase Hotel Attachment by tracking hotel nights booked in a PNR using the Zoom And Go Visual PNR™ and Hotel Attachment Ribbon.	✓	✓	✓
Compare hundreds of Hotel Room Rates and Rate Codes from up to 10 hotels at once. Decrease time on call and increase agent effectiveness.	✓	✓	✓
Find the intersection set of Agency Preferred and Client Negotiated Hotels. Determine the best hotel rate across multiple Rate Code options.	✓	✓	✓
Search by Street Address, Neighborhood, Zip/Postal Code (without knowing IATA airport code). Return all Hotels in proximity to input	✓	✓	✓
Filter all available Room Rates by Preferred / Negotiated Rate Codes and by Client Room Rate parameters (or any combination of the two).	✓	✓	✓
Filter all available Room Rates by room and bed type	✓	✓	✓
Filter / hide Non-Refundable Room Rates from the display.	✓	✓	✓
Send a Trip Proposal / Quote to a Client from within the booking path	✓	✓	✓
Create passive / manual / GK segments for any type of hotel (GDS or non-GDS) from within the application.	✓	✓	✓
Hotel bookings are fully integrated into GDS in the correct format so they are fully compatible with any back-end accounting tools.	✓	✓	✓
Quickly book the same hotel again if required.	✓	✓	✓
Read TripAdvisor Reviews from within the application.	✓	✓	✓
View Google Street View and Bing’s Bird’s Eye View for any hotel in the world (where available) from within the application.	✓	✓	✓
Compare hotel rates easily on an “apple to apples” basis by including any Resort Fees in the Net Rates prior to taxes. (Not possible in the GDS alone).	✓	✓	✓
View hotel rates in any designated default currency without having to change from Supplier currency.	✓	✓	✓
Ensure Hotel Room Rates returned to the GDS are the same as the actual Room Rates negotiated by the Client or Agency.		✓	✓
Increase efficiency by having all relevant Rate Codes (Star Rates, Client and Agency Rate Codes, etc.) automatically entered in the preferred order as part of the availability request without having to enter them manually.		✓	✓

User Administration – Customize Display by Roles and Users			
Control the POS and reduce time on call by prioritizing and sorting Hotels by Client Negotiated and Agency Preferred Hotels. (i.e. Control the display, color coding and preferencing of any Hotel).		✓	✓
Ensure policy compliance by preventing Hotels from squatting on out-of-contract / out-of-program Rate Codes and making sure that Agents book the current in-program Hotels and Rates. (i.e. Control the request of Client or Agency Rate Codes to be retrieved only from in-program Hotels).		✓	✓
Increase Agency revenue opportunities by blocking any room rates that have a Client Rate Code in non-Negotiated Hotels (e.g. Only show Client Rates at Client Negotiated Hotels so that an Agency could earn commission from booking a Client at any non-Negotiated Hotels).		✓	✓
Manage Hotel revenues by maintaining required booking levels for direct Hotel deals. Control the display of Rates from suppliers at the Hotel level by Agency, group of Agents or by Client. (i.e. Do not display Non-GDS / Third Party / OTA rates at a specified Hotel, group of Hotels or Chain).		✓	✓
Ensure all Agency and Client Rates are being retrieved by enforcing requests of Rates Codes. Control the Rate Codes requested by Agency, group of Agents or Agent. (i.e. Specify designated Rate Codes from being requested and prevent from being changed at the POS by any user).		✓	✓
Optimize revenue allocation by assigning Hotel bookings to different IATA codes depending upon Agency requirements. IATA number is automatically written back to GDS in correct format for any back-end tools.		✓	✓
Book the best room for Clients faster by pre-configuring the sort and display of all relevant Room Rate options. (i.e. Specify sort order for Hotel room rates by Rate Codes, Price or combination thereof)		✓	✓
Configure Hotel Display by Agency, Groups of Agents, Agent or Clients		✓	✓
Promote, demote, or hide Agency specified Hotels or Chains		✓	✓
Promote Client Negotiated Hotels or demote / hide any specified Hotels		✓	✓
Promote Consortia Hotels		✓	✓
Manage your POS by hiding non-refundable room rates from being displayed. Configure for the Agency, group of Agents, Agent or Client.		✓	✓
Launch to Client office location and check availability for all Hotels in proximity to that location. Enhance value-add and decrease time on call.		✓	✓
Add custom reason codes by Client for booking a non-Preferred / non-Negotiated Hotel.		✓	✓
Analytic Reporting - View booking information in real-time			
View and download in real time any Hotel Bookings by Hotel, Client, Agency, Groups of Agents, or Agent.			✓
Export data to csv for use in Excel.			✓
